THE WHEAT BOARD

No authoritative word has emanated from Ottawa regarding the formation of the Canadian Wheat Board. President Bennett suggested some weeks ago. The suggestion has been made that the board should consist of a small body of advisory committee, and a newspaper despatch from Ottawa said that Mr. Bennett's suggestion was not a serious one. The board would be a member of the small body, along with John McFarland.

A strong desire of the grain trade, however, from Winnipeg to Ottawa, to intervene the government. It is reported that this body would be the government to segregate the holdings of stabilization wheat and sell it only on occasion without and to let the country be disappointed in the usual way without any interference or stabilization.

The grain opinion now is that the Canadian elevator will be 150 to 200 million bushels, heavy demand having failed to materialize the spring.

Setting a Standard

U.G.G. Elevators have set, throughout western Canada, a standard of service and treatment in handling grain for farmers.

It pays to have a U.G.G. Elevator at your station, and it pays to make use of it.

The Higher Yields From Small Plots

Scientific applications of Commercial fertilizers have often noted the superior yields that come from small plots.

Lower yields obtained from large fields could not be obtained with the same results. This is because the small plots are usually all removed by hand, whereas on large fields the maintenance part is done by machine.

It is evident, therefore, that much valuable material will be saved if weeds are well kept down on small plots.
